

BALLISTIC BLANKETS & CURTAINS

Ballistic Curtains can be used to protect the interiors of buildings and vehicles such as: Firing Ranges, Banks, Security Posts, Ground Vehicles, Aircraft and much more.

Fragmentation blankets will defeat any U.S. or European Grenade. Designed to protect personnel as well as costly equipment.

Curtains are designed for quick installation and removal and can be custom made to fit any application. Our curtains can be linked together using industrial hook and loop fasteners for protecting large areas. These hook and loop junctions are reinforced using webbing and buckles. The ballistic material at the junctions overlap to ensure there is no "weak link" in the system.

Every blanket and curtain is covered with water proof Cordura and can be ordered in a variety of colors.

Shown with grommets and carry handles, applications may require the use of one or both.
